Home :

I created 3 different models for the Categories, Best Sellers and the Products page. I have successfully pulled these images from the “fake database” but I could not figure out how to implement the boolean attribute indicating if it is a best seller or not.

Products :

Mostly all the functionalities were met except the boolean attribute indicating if it is a best seller or not. I was not sure how to implement this functionality, otherwise everything went well.

I basically took the Signup and Login form from W3Schools but changed the CSS to my liking. There is no functionality for this page and Login page. Doing CSS on this was a headache but DEV Tools was a big friend.

Login :

The image shows a web application's login page. At the top, there is a dark navigation bar with a logo on the left and links for 'Login', 'Sign Up', 'Products', and 'Home' on the right. The main content area has a light gray background. In the center, there is a white box containing the login form. The form starts with the word 'Login' in a large font, followed by a circular profile picture of a woman. Below the picture are two input fields: 'Username' and 'Password', each with a placeholder text 'Enter Username' and 'Enter Password' respectively. A dark 'Login' button is positioned below the password field. Underneath the button is a checkbox labeled 'Remember me'. At the bottom of the form, there is a red 'Cancel' button and a blue link that says 'Forgot password?'. The footer of the page is dark, featuring a small logo on the left, the text 'Created by Vladislav Matveev' in the center, and a circular refresh icon on the right.
